Notes:
Cumulative wind farms (to 25km) based on information available to LUC on 01/03/2022.

The ZTV is calculated to turbine tip height from a viewing height of 2m above ground level. The ZTV extents for all wind farms are based on SNH guidance (Visual Representation of Wind farms, SNH, 2017).

The terrain model assumes bare ground and is derived from OS Terrain 50 height data (obtained from Ordnance Survey in July 2019). Earth curvature and atmospheric refraction has been taken into account. The ZTV was calculated using ArcMap10.8.1 software.
